## CAREER OBJECTIVES

---

Aspiring Technical Consultant with a strong foundation in backend architecture (C/C++, DBMS) and full-stack web development. Passionate about problem-solving, navigating the Software Development Lifecycle (SDLC), and translating complex technical requirements into efficient, client-centric solutions.

## EDUCATION

---

|                                                                                                        |                                         |
|--------------------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>Maulana Azad National Institute of Technology, Bhopal</b><br><i>Master of Computer Applications</i> | 2025 – 2028<br><i>CGPA: 8.10</i>        |
| <b>Lucky Institute of Professional Studies, Jodhpur</b><br><i>Bachelor of Computer Applications</i>    | 2022 – 2025<br><i>Percentage: 83.7%</i> |

## TECHNICAL SKILLS

---

**Core Fundamentals:** Object-Oriented Programming (OOP), Operating Systems (OS), Database Management (DBMS)  
**Languages:** C, C++, JavaScript, PHP, SQL  
**Web Technologies:** HTML5, CSS3, TailwindCSS, Node.js, React, Express, REST APIs  
**Tools & Methodologies:** Git, VS Code, Antigravity, Software Development Lifecycle (SDLC), Agile Methodologies

## PROJECTS

---

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>EOMS</b>   <i>React, Express, Node.js</i>   <a href="#">GitHub</a>   <a href="#">Live</a>                                                                                                                                                                                                                                                                                                                                                                                                                                               | Aug 2025 – Present  |
| <ul style="list-style-type: none"><li>Engineered a full-stack management system utilizing React and Express to streamline data processing and optimize organizational workflows.</li><li>Developed and integrated RESTful APIs to manage JSON request and response structures, ensuring reliable data flow between the client interface and server backend.</li><li>Navigated the complete Software Development Lifecycle (SDLC) to deliver a scalable, problem-solving application focused on seamless client engagement.</li></ul>       |                     |
| <b>Dotlify</b>   <i>HTML5, CSS3, JavaScript, TailwindCSS</i>   <a href="#">GitHub</a>   <a href="#">Live</a>                                                                                                                                                                                                                                                                                                                                                                                                                               | May 2025 – May 2025 |
| <ul style="list-style-type: none"><li>Built a secure web application for generating email aliases, prioritizing a clean, responsive, and client-friendly user interface.</li><li>Leveraged modern ES6+ JavaScript features and TailwindCSS to design scalable components, ensuring optimal frontend performance and cross-device reliability.</li></ul>                                                                                                                                                                                    |                     |
| <b>VisualDS</b>   <i>HTML5, CSS3, JavaScript, Node.js</i>   <a href="#">GitHub</a>   <a href="#">Live</a>                                                                                                                                                                                                                                                                                                                                                                                                                                  | Jan 2025 – Mar 2025 |
| <ul style="list-style-type: none"><li>Identified a need to simplify abstract computer science concepts and developed an interactive web platform to visualize core Data Structures and Algorithms.</li><li>Implemented dynamic operations with real-time animations, demonstrating strong problem-solving skills and providing instant visual feedback on algorithm mechanics.</li><li>Designed an intuitive, responsive user interface to enhance user engagement and improve the overall educational experience for end-users.</li></ul> |                     |
| <b>Journey Junction</b>   <i>HTML5, JavaScript, PHP, MySQL</i>   <a href="#">GitHub</a>                                                                                                                                                                                                                                                                                                                                                                                                                                                    | Jan 2024 – Mar 2024 |
| <ul style="list-style-type: none"><li>Architected a responsive travel web application focusing on efficient data storage and seamless client-side interactions.</li><li>Designed a robust relational database schema using MySQL, optimizing backend operations and SQL queries for reliable data retrieval.</li><li>Built user-friendly interfaces bridging backend architecture with front-end usability, showcasing cross-functional development capabilities.</li></ul>                                                                |                     |

## CORE COMPETENCIES

---

- Strong analytical and problem-solving skills, with a deep understanding of system architecture and data models.
- Ability to translate technical requirements into practical applications and client-focused solutions.
- Quick learner with a strong aptitude for adapting to new frameworks and clear technical documentation.
